Summary

Backend-focused developer who builds web applications and the systems behind them.

Experience

Social Media Application

2025

- Developed a full-stack social media application featuring secure user authentication and role-based authorization to control access to protected resources.
- Implemented full CRUD functionality for posts and comments, including post creation, editing, deletion, likes, and follow/unfollow features.
- Designed a structured and scalable backend architecture with clean RESTful API communication to efficiently manage user interactions and data flow.

E-commerce Application

2025

- Developed a Dockerized full-stack e-commerce app with React (Vite) and Django REST Framework, featuring authentication, product management, shopping cart functionality, and a responsive UI with a clean, maintainable REST API.

Hack Assembler

2025

- Developed a Hack assembler in Python, inspired by the Nand2Tetris course. Completed a full study of the Hack hardware platform, designing my own CPU from logical gates, and implemented a two-pass assembler that converts .asm assembly files into .hack binary files.

Education

Frontend Development: React

2025-2026

Skillwill Swiss College, Tbilisi, Georgia

Computer Science

2026

Ivane Javakishvili Tbilisi State University (TSU),
Tbilisi, Georgia

Skills

Frontend Development

- HTML5
- CSS3
- Tailwind
- JavaScript
- TypeScript
- React

Backend Development

- python
- C++
